Why Superset?

Superset is a modern data exploration and data visualization platform. Superset can replace or augment proprietary business intelligence tools for many teams. Superset integrates well with a variety of data sources.

Superset provides:

- A **no-code interface** for building charts quickly
- A powerful, web-based **SQL Editor** for advanced querying
- A **lightweight semantic layer** for quickly defining custom dimensions and metrics
- Out of the box support for **nearly any SQL** database or data engine
- A wide array of **beautiful visualizations** to showcase your data, ranging from simple bar charts to geospatial visualizations
- Lightweight, configurable **caching layer** to help ease database load
- Highly extensible **security roles and authentication** options
- An **API** for programmatic customization
- A **cloud-native architecture** designed from the ground up for scale

Database: postgresql examples

Schema: public

See table schema: birth_names

birth_names

- ds: TIMESTAMP
- gender: TEXT
- name: TEXT
- num: BIGINT
- state: TEXT
- num_boys: BIGINT
- num_girls: BIGINT

```

SELECT
  ds,
  name,
  gender,
  state,
  num
FROM birth_names
LIMIT 100

```

Results Query history public.birth_names

100 rows Filter results

	ds	name	gender	state
1	1965-01-01T00:00:00	Aaron	boy	CA
2	1965-01-01T00:00:00	Amy	girl	CA

18	1965-01-01T00:00:00	Cheryl	girl	CA

Supported Databases

Superset can query data from any SQL-speaking datastore or data engine (Presto, Trino, Athena, [and more](#)) that has a Python DB-API driver and a SQLAlchemy dialect.

Here are some of the major database solutions that are supported:

FIREBOLT

Timescale

DB2

SQLite

MariaDB

VERTICA

Firebird

Greenplum

ClickHouse

Exasol

A more comprehensive list of supported databases along with the configuration instructions can be found [here](#).

Want to add support for your datastore or data engine? Read more [here](#) about the technical requirements.

Installation and Configuration

Try out Superset's [quickstart](#) guide or learn about [the options for production deployments](#).

Get Involved

- Ask and answer questions on [StackOverflow](#) using the **apache-superset** tag
- [Join our community's Slack](#) and please read our [Slack Community Guidelines](#)
- [Join our dev@superset.apache.org Mailing list](#). To join, simply send an email to [dev-subscribe@superset.apache.org](#)
- If you want to help troubleshoot GitHub Issues involving the numerous database drivers that Superset supports, please consider adding your name and the databases you have access to on the [Superset Database Familiarity Rolodex](#)
- Join Superset's Town Hall and [Operational Model](#) recurring meetings. Meeting info is available on the [Superset Community Calendar](#)

Contributor Guide

Interested in contributing? Check out our [CONTRIBUTING.md](#) to find resources around contributing along with a detailed guide on how to set up a development environment.

Resources
